

# Fakhruddin Abdi

**I love coding, and a big fan of functional programming.**

Sulaymaniyah

[abdi.fakhruddin@gmail.com](mailto:abdi.fakhruddin@gmail.com)

+9647501176124

I consider myself a full-stack developer but I used to manage projects as CEO or CTO.

I was busy with my own startup for the rest of my careers

Sometimes I had more than 20 team members and managed them; sometimes I was alone, seeking a project to work on as a freelancer.

But i learned how to manage myself ( very important ) and others and I know very well what's the success/failure points and how to deal with developers/clients/stakeholders and how to get a project to a final point.

Willing to relocate: Anywhere

Sponsorship required to work in the US

## Work Experience

---

### **Co-Founder and CEO**

Harzaan - Sulaymaniyah

January 2017 to Present

A classified ads service for Iraq / Kurdistan.

We want to make it the market leader in the region.

I have developed the first version of the website and mobile application, using ReactJS and React Native.

When we got the investment, I re-build the project from scratch

I hired top people to rebrand/redesign and recode the whole project

It was a great experience, dealing with the top talented developers and getting the project to a higher level of quality.

And the project is live since 2017, we got many experiences about how to maintain and update and upgrade a production project.

### **Co-Founder and CTO**

Softcode - Leeds, AL

Present

I founded the company with Dr. Layik who's living in Leeds right now at 2016

We used the company for part-time projects in the United Kingdom and other countries

Working with Dr. Layik always helped me to learn more.

We got several top projects as a contractor.

We developed database projects for the Kurdistan region government, and we portal for universities and POS systems for local shops

## Co-Founder and CTO

Zeyton - Erbil

January 2014 to April 2016

Zeyton was a social knowledge platform that targeted the Middle East audience. We took on the task of competing with the giants and building a knowledge graph of Google's scale.

We worked with what is now Amazon Neptune to rebuild [www.freebase.com](http://www.freebase.com).

We traced the steps they took to put together the knowledge of mankind.

Freebase is now Google Knowledge Graph.

The scale of such a project and graph database requires a scalable front end down to the very configuration of raids—a global network of content delivery network and security to every line of code.

The project scale and investment were big ( targeting the MENA region for the first phase ). So we got a chance to work with many developers and companies around the world.

## Senior Project Manager

Technology incubator center of UOK - Sanandaj

February 2012 to 2014

I started here.

I joined a startup team for free:)

Just to learn more and make networking.

## Education

---

### Bachelor's in Software Engineering

Malayer university - Hamadan

October 2008 to May 2012

### High school diploma in Mathematics

Sheyk shahtoot, Talented high school - Sanandaj

June 2005 to June 2008

### Middle school education in General Studies

Imam gazali, Talented school - Sanandaj

June 2002 to June 2005

## Skills

---

- Project management (10+ years)
- JavaScript (5 years)
- Strategic planning (10+ years)
- React (5 years)
- Drupal (2 years)
- React Native (4 years)
- Firebase (5 years)
- Meteor JS (2 years)

- GraphQL (2 years)
- Semantic Web (2 years)
- Graph Databases (2 years)
- Git (10+ years)
- Agile (5 years)
- RDF (2 years)
- Next js (1 year)
- GraphQL (1 year)
- PostgreSQL (1 year)
- SQL (3 years)
- Node.js
- NoSQL
- UNIX

## Languages

---

- English - Fluent
- Farsi - Expert
- Kurdish - Expert
- Arabic - Fluent
